These instructions generally describe the installation, operation and maintenance of the INFINITY™ Liquid Disinfection System. Questions that are not specifically answerable by these instructions should be directed to the Factory.

Atlantic Ultraviolet Corporation® takes all possible precautions when packaging equipment to prevent damage. Carefully inspect and report all damages. Do not install damaged equipment. Follow all instructions on any labels or tags. Carefully inspect all packing materials before discarding to prevent the loss of accessories, mounting hardware, spare parts or instructions.

The information and recommendations contained in this publication are based upon data collected by the Atlantic Ultraviolet Corporation® and are believed to be correct. However, no guarantee or warranty of any kind, expressed or implied, is made with respect to the information contained herein. Specifications and information are subject to change without notice.
SAFETY WARNINGS

• All personnel should be alerted to the potential hazards indicated by the product safety labeling on this unit.
• The following conventions are used to indicate and classify precautions in this manual and on product safety labeling. Failure to observe precautions could result in injury to people or damage to property.

⚠️ This is the safety alert symbol. It is used to alert you to potential personal injury hazards. Obey all safety messages that follow this symbol to avoid possible injury or death.

⚫ DANGER
Danger indicates an IMMINENTLY hazardous situation, which, if not avoided, WILL result in death or serious injury.

⚠️ WARNING
Warning indicates a POTENTIALLY hazardous situation, which, if not avoided, COULD result in death or serious injury.

⚠️ CAUTION
Caution indicates a POTENTIALLY hazardous situation, which, if not avoided, MAY result in minor or moderate injury.

SAFETY INSTRUCTIONS

⚠️ WARNING
To guard against injury, basic safety precautions should be observed, including the following:

1. Read and follow ALL safety instructions.
2. Do not use this disinfection system for other than its intended purpose as described in this manual.
3. Do not alter design or construction.
4. Do not remove any labels or devices.
5. ⚠️ DANGER
To prevent the risk of severe or fatal electrical shock, special precautions must be taken since water is present near electrical equipment. Always disconnect power before performing any service or maintenance.
6. ⚠️ WARNING
Avoid exposure to direct or reflected germicidal ultraviolet rays. Germicidal ultraviolet rays are harmful to the eyes and skin.
7. Intended for indoor use only. The system should be protected from the elements and from temperatures below freezing.
8. Do not operate disinfection system if lamp cable, lamp connection, power cord and/or plug are damaged, or if any other damage to the disinfection system is visible or suspected
9. Electrical power supplied, to the disinfection system, MUST match power requirements listed on the disinfection system.
10. ⚠️ WARNING
Plug the system only into an APPROVED GROUND FAULT CIRCUIT INTERRUPT (GFCI) RECEPTACLE.
11. ⚠️ WARNING
Do not operate without proper electrical ground.
12. Do not exceed disinfection system’s maximum rated flow capacity.
13. Do not exceed maximum operating pressure of 100 PSI.
14. Read and follow all notices and warnings on the disinfection system.
15. SAVE THESE INSTRUCTIONS.

SAFETY LABELS

⚠️ DANGER
Danger Label: Hazardous Voltage and Ultraviolet Radiation (00-0199A1)

Location of Danger Label (00-0199A1)

⚠️ WARNING
Warning indicates a POTENTIALLY hazardous situation, which, if not avoided, COULD result in death or serious injury.

⚠️ CAUTION
Caution used without the safety alert symbol indicates a potentially hazardous situation, which, if not avoided, may result in property damage.

⚠️ WARNING
Warning indicates a POTENTIALLY hazardous situation, which, if not avoided, COULD result in death or serious injury.

⚠️ CAUTION
Caution used without the safety alert symbol indicates a potentially hazardous situation, which, if not avoided, may result in property damage.

This symbol/pictorial is used to identify an ELECTRICAL SHOCK or ELECTROCUTION hazard.

This symbol/pictorial is used to identify an ULTRAVIOLET LIGHT hazard.

This symbol/pictorial is used to identify an ELECTRICAL SHOCK or ELECTROCUTION hazard.

This symbol/pictorial is used to identify the need to wear approved ultraviolet blocking eyewear.

This symbol/pictorial is used to identify the need to wear approved ultraviolet blocking face shield.

This symbol/pictorial is used to identify components which must not be disposed of in trash.
PRODUCT APPLICATION

CONSTRUCTION

• The INFINITY™ Liquid Disinfection System is designed to mount horizontally. Mount on a horizontal surface or vertical surface using the optional wall mounting kit.

• The chamber is passivated and electropolished Stainless Steel Type 316.

• EASY-OFF™ End Caps allow for quick and easy lamp change, without disconnecting from the water supply or draining the purifier. No tools are required.

• Sanitary fittings provide easily assembled, leak-proof connections, which can be rotated and individually oriented for versatility during installation.

PRINCIPLE OF OPERATION

The INFINITY™ design has been carefully conceived to provide adequate germicidal dosage throughout the disinfection chamber, for liquids with relatively high ultraviolet absorbency, including but not limited to; liquid sugars and sweeteners, re-circulated process water, water based lubricants, fruit drinks and juices. The dosage, as it applies to ultraviolet disinfection, is a function of time, and intensity, of the ultraviolet radiation, to which the liquid is exposed. The exposure time, in seconds, is the total time it takes the liquid to flow through the disinfection chamber, exposing it to the germicidal lamp. Exposure time is related to the flow rate; the higher the flow rate, the lower the exposure time or the lower the flow rate, the higher the exposure time. The ultraviolet intensity is the amount of energy, per unit time, emitted by the germicidal lamp.

The operation of the INFINITY™ is as follows:

1. The liquid enters the disinfection system and flows into the annular space between the quartz sleeve and the chamber wall.
2. Suspended microorganisms are exposed to the ultraviolet rays emitted by the germicidal lamp.
3. The LED indicator light, located on the ballast, provides visual indication of germicidal lamp operation.
4. The liquid leaving the system is instantly ready for use, no further contact time is required.

LIMITATION OF USE

Since the INFINITY™ Liquid Disinfection System was developed for liquids with relatively high ultraviolet absorbency, performance will vary.

If the influent being treated is process water or liquid other than water, biological testing should be performed to assure that the requirements of the process and quality specifications of the product are being reliably maintained.

If, for any reason, there is trouble achieving proper performance, contact our application specialists. Contact options can be found in the “User Assistance” section on the back page of this manual.

INSTALLATION

LOCATION

1. The disinfection system is intended for indoor use only. The disinfection system is designed to mount horizontally. The disinfection system should be protected from the elements and from temperatures below freezing. The ambient temperature, in the area surrounding the disinfection system, should be between 35° F and 100° F.

2. Electrical power supplied to the disinfection system MUST match power requirements listed on the disinfection system. Use of a voltage surge protector is recommended.

3. Plug disinfection system only into an APPROVED GROUND FAULT CIRCUIT INTERRUPT (GFCI) RECEPTACLE.

4. The disinfection system should be located in a dry, well-lit area, which provides enough room to perform routine maintenance. This includes a minimum distance of one chamber length from the powered or ballast end, of the system, to allow for cleaning and/or the changing of the lamp and quartz sleeve as well as a minimum of 6 inches on the opposite end of the disinfection system.

5. The disinfection system should always be located closest to the point of use, and after all other treatments. This reduces the chance of the purified liquid being re-contaminated by bacteria in the distribution system after the disinfection system.

6. As with any water handling device, the disinfection system should be located in an area where any possible condensation or leakage from the disinfection system, any purifier accessory and/or plumbing will not result in damage to the area surrounding the disinfection system. For added protection, it is recommended that a suitable drain pan be installed under the purifier. (Continued on Page 5)
The drain pan must be plumbed to an adequate, free flowing drain to prevent water damage in event of a leak. There are numerous leak detection/flood stop devices, available on the market today, designed to stop flow of water, reducing the chance of water damage due to leakage. For more details regarding leak prevention and/or limiting damages due to leaks please contact factory.

7. The disinfection system should always be located prior to the addition of any additives, which will increase the ultraviolet absorbency, decreasing the ultraviolet transmission through the liquid.

8. The system should be located within 5 feet of an electrical outlet.

**RECOMMENDED INSTALLATION**

IN ORDER TO PERFORM THIS TASK, BE SURE TO WEAR THE FOLLOWING SAFETY EQUIPMENT: SAFETY GOGGLES OR A FACE SHIELD, AS WELL AS GLOVES.

1. Remove disinfection system from shipping carton. Inspect disinfection system, power cord and plug for damage. Do not operate if there is any damage to the disinfection system, power cord or plug.

2. Units occasionally experience damage in shipment due to the fragility of the quartz sleeve. It is, therefore, recommended to inspect the system for damage to the quartz sleeve after it has been removed from the shipping carton. Each end of the unit as well as the inlet and outlet should be viewed to see if the quartz sleeve has experienced damage. If the quartz sleeve shows signs of damage it should be replaced before the system is pressurized. See the “Quartz Sleeve Installation or Replacement” in the “Maintenance” section on Page 8 for the proper method of replacing the quartz sleeve in your disinfection system.

3. All models of the INFINITY™ disinfection systems are shipped with the lamp packed separately. Keep the lamp aside for installation once the system has been properly installed

4. The disinfection system should be mounted horizontally, on a flat level surface.

5. The disinfection system must be plumbed with the lower sanitary fitting connected to the inlet supply and the upper fitting connected as the outlet.

6. Shut off valves should be installed on both the inlet and outlet sides of the disinfection system. The use of bypass valves is not recommended. The shut off valves allow the system to be isolated from the influent supply, which is required when removing quartz sleeve. (Continued on Page 6)
7. When all plumbing connections are complete, allow 2 to 3 times the system volume of liquid through the system, or until no air or bubbles are observed. Close the outlet shutoff valve. With the system pressurized, it should be checked for leaks. Once it is determined that there are no leaks, close the inlet valve.

8. Install lamp. To install, see “Figure 3 - Lamp Replacement”:
   • Unpack the lamp.
   • Remove EASY-OFF™ End Cap and lamp lead wire by pulling cap off the static gland nut. Expose lamp socket by sliding End Cap along the wire away from the socket.
   • Carefully slide lamp straight into the quartz sleeve, without angling until approximately 2 inches, of the lamp, protrudes from the end of the static gland nut. **DO NOT FORCE LAMP.**
   • While holding lamp end, carefully push lamp socket on. Slide remainder of the lamp into the quartz sleeve. Slide the EASY-OFF™ End Cap along the lead wire and push onto the static gland nut.

   **CAUTION** Lamp and quartz sleeve are easily damaged. Exercise care when handling.

**RECOMMENDED OPTION (MUST BE SPECIFIED AT TIME OF ORDER)**

1. **GUARDIAN™ Ultraviolet Monitor**: Visually indicates the level of germicidal ultraviolet energy that penetrates the quartz sleeve and the water within the disinfection system. The ultraviolet monitor will detect reduction of ultraviolet levels due to:
   • Fouling or deposits on the quartz sleeve.
   • Poor ultraviolet transmission through the water; color, turbidity, and organic or other impurities in the water can reduce or interfere with the transmission of ultraviolet rays.
   • Lamp outage or component failure. (Monitor will not function in power outage.)
   • Depreciation of the lamp output due to usage or other cause. Lamp output gradually depreciates with use. Lamp replacement is recommended once each year.

2. **Promate™ Safety Goggles**: Safety eyewear **MUST** be used as general-purpose safety protection and for additional shielding from ultraviolet rays.

3. **Promate™ Face Shield**: Lightweight visor with adjustable headgear provides eye and face protection from germicidal ultraviolet rays.

**MAINTENANCE**

**WARNING** Always disconnect power to this equipment before performing any service or maintenance.

The disinfection system is designed to operate with a minimal amount of maintenance. A regular cleaning cycle of the quartz sleeve **MUST** be established, and carefully maintained, based on visual inspection and experience. The frequency of cleaning will vary with the conditions surrounding each installation. Ordinary maintenance consists of:

   • The **STER-L-RAY®** Germicidal Ultraviolet Lamp used in the **INFINITY™** has a manufacturer’s rated average effective life of 10,000 hours. It may operate longer than their rated effective life, but the reduction in ultraviolet output will make it impractical to use past the manufacturer’s rated life. For maximum efficiency lamp replacement is recommended every 10,000 hours of operation.

   • Cleaning of the **CRYSTAL CLEAR™** quartz sleeve, when conditions warrant. It is recommended that the inspection of quartz sleeve be performed after one month of use. Ordinary maintenance consists of the cleaning of the quartz sleeve with alcohol or a natural cleaner like Citrus Power or Simple Green®, when conditions warrant. **DO NOT** use any commercial cleaners, abrasive or scouring products when cleaning the quartz sleeve. Use of commercial cleaners, abrasive or scouring products may scratch or leave a residue on the quartz sleeve. Scratches and cleanser residue will scatter the ultraviolet radiation reducing the effectiveness of the disinfection unit.

   • Contact factory with questions.

**INSPECTION**

1. Regularly inspect the disinfection system to ensure that the germicidal lamp is still in operation. An LED indicator light located on ballast provides visual indication of germicidal lamp operation. This provides an indication of lamp operation only and does not indicate the level of ultraviolet intensity or transmission through the liquid.

2. To ensure proper operation of the disinfection system, regular biological testing of the liquid should be performed on a schedule which, at a minimum, is: at installation, quarterly for the first year of service and annually, at lamp replacement, for the life of the equipment. *(Continued on Page 7)*
3. Additional testing should be performed whenever modifications, change, or additions are made to plumbing system, pumps, well source water etc. to ensure adequate disinfection under new condition.

4. As with any disinfection system installation, routine maintenance is necessary to ensure you equipment is operating correctly. Regular inspection must also include confirmation that approved ground fault circuit interrupt (GFCI) receptacle is still operational and that disinfection system is plugged into this GFCI. Any components which are damaged or broken should be replaced.

**Breakage**

**CAUTION** Broken Quartz is **SHARP**. It is recommended that Protective Goggles or Face Shield and Gloves are worn. Wear protective gloves when handling broken ultraviolet lamps and/or quartz sleeves. In the event of breakage, **DO NOT** use a household vacuum cleaner to pick up fragments of quartz. Sweep up debris into a plastic bag and dispose of properly.

**Disposal of Mercury Added Lamps**

Germicidal ultraviolet lamps, like standard fluorescent lamps contain small amounts of mercury. Mercury added lamps should not be placed in the trash. Dispose of properly. For further information regarding the disposal and recycling of lamps containing mercury, along with Federal and State requirements visit LampRecycle.org. For more information on **STER-L-RAY®** Germicidal Ultraviolet Lamps, visit Ultraviolet.com or BuyUltraviolet.com.

**Lamp Installation or Replacement**

1. **WARNING** Disconnect power to **INFINITY™** Liquid Disinfection System.

2. Remove **EASY-OFF™** End Caps by pulling each cap off static gland nut. Slide each end cap along the wire away from the socket.

3. Carefully withdraw lamp approximately 2 inches from chamber while feeding lamp socket and lead wire on opposite end of chamber.

4. While holding lamp end, carefully remove lamp socket on end now exposed.

5. Next, carefully slide lamp back into chamber, until approximately 2 inches of the lamp is exposed on the opposite end. Hold lamp and remove lamp socket. **(Continued on Page 8)**
Quartz Sleeve Installation or Replacement

IN ORDER TO PERFORM THIS TASK, BE SURE TO WEAR THE FOLLOWING SAFETY EQUIPMENT: SAFETY GOGGLES OR A FACE SHIELD, AS WELL AS GLOVES.

1. **WARNING** Disconnect power to INFINITY™ Liquid Disinfection System.
2. Shut off or disconnect liquid supply to both inlet and outlet sides of the system. Draining of the system is required at this stage.
3. Follow the steps in “Lamp Installation or Replacement” to remove lamp.
4. Unscrew static gland nuts from each end of the chamber. Avoid striking quartz sleeve with static gland nut.
5. Remove Teflon® washer and O-Ring from both ends of quartz sleeve. Teflon® washer will sometimes remain within the static gland nut. If so, remove Teflon® washer from static gland nut before proceeding.
6. Carefully remove quartz sleeve from chamber. **NOTE:** It is advisable to support the quartz sleeve on the opposite end with your finger so that it does not drop to the bottom of the chamber as it slides into the chamber.
7. Once the quartz sleeve is removed, clean with alcohol or a mild, non-abrasive detergent. Stubborn stains usually can be removed with a dilute hydrochloric acid. **NOTE:** Follow all manufacturer’s instructions and precautions when handling chemicals.
8. Reassemble in reverse order. Make sure the quartz sleeve protrudes an equal distance past each threaded nipple. Be sure O-Rings are placed on quartz sleeve before Teflon® washer.
9. Tighten static gland nuts firmly by hand only, **DO NOT USE HAND TOOLS.** Tightening with hand tools is likely to cause quartz sleeve to break. (Continued on Page 9)
9

10. When all connections are complete, restore flow and allow 2 to 3 times the system volume of liquid through the system, or until no air or bubbles are observed. Close the outlet shutoff valve. With the system pressurized, it should be checked for leaks. Once it is determined that there are no leaks, close the inlet valve.

11. If no leaks occur, reinstall lamp, following the steps in “Lamp Installation or Replacement” section.

**WARNING** Germicidal ultraviolet rays are harmful to eyes and skin. Do not restore power to disinfection system until lamp and both EASY-OFF™ End Caps have been properly reinstalled.

**REPLACEMENT OF BROKEN QUARTZ SLEEVE**

Figure 4 - Chamber Head Removal

IN ORDER TO PERFORM THIS TASK, BE SURE TO WEAR THE FOLLOWING SAFETY EQUIPMENT: SAFETY GOGGLES OR A FACE SHIELD, AS WELL AS GLOVES.

**CAUTION** Broken Quartz is SHARP. It is recommended that protective goggles and gloves are worn when handling.

**WARNING** Disconnect power to INFINITY™ Liquid Disinfection System. Shut off liquid supply to disinfection system via inlet and outlet shut off valves. Completely drain chamber.

Follow the steps in “Quartz Sleeve Installation or Replacement” to remove lamp and quartz sleeve.

1. **CAUTION** Carefully remove as much of the broken quartz sleeve as possible, from each end of the chamber.

2. Remove sanitary quick clamps and sanitary tube gaskets from inlet and outlet fittings of the disinfection unit. Keep clamps and gaskets aside.

3. Remove ballast; Use a No. 2 Phillips screwdriver, loosen the pan head screw on the face of the ballast-mounting clamp located on the underside of the ballast. When tension is off the mounting clip, lift ballast off the chamber head clamp.

4. Remove chamber head clamps, by using a 7/16” wrench to loosen and remove the 1/4” nuts from the head clamps.

5. Remove chamber heads from the chamber.

6. Cover exposed fitting of adjacent unit.

7. Remove any broken pieces of the quartz sleeve through the open ends of the chamber. Thoroughly clean chamber, to remove all quartz fragments from the interior of the chamber. Carefully discard all pieces of the broken quartz sleeve.

8. Inspect the large O-Ring used to seal the chamber and the chamber head. Make sure the O-Ring is seated properly between the chamber head ring and the flare of the chamber head. *(Continued on Page 10)*
9. To reinstall the chamber head, push chamber head flange into the chamber until both flared ends, of the chamber and the head, mate against the O-Ring.

10. Replace the head clamps around the flared ends of the head and chamber. Install the 1/4” nuts and tighten using a 7/16” wrench.

11. Reinstall ballast; Place the ballast on the outer band of the chamber head clamp, lamp lead and lamp operation indicator should be pointing out toward the chamber head. Using a No. 2 Phillips screwdriver, tighten the pan head screw on the ballast-mounting clamp.  *(Continued on Page 10)*

12. Carefully insert quartz sleeve into chamber. **NOTE:** It is advisable to support the far end of the quartz sleeve to guide it through the opening in the threaded gland fitting. Center the quartz sleeve in the chamber, making sure the quartz sleeve protrudes an equal distance past each threaded gland fitting.

13. Reinstall O-Rings, Teflon® washers, and static gland nuts. Be sure O-Rings are placed on quartz sleeve before the Teflon® washers. Tighten static gland nuts firmly by hand only, **DO NOT USE HAND TOOLS.** Tightening with hand tools is likely to cause quartz sleeve to break.

14. When all connections are complete, restore flow and allow 2 to 3 times the system volume of liquid through the system, or until no air or bubbles are observed. Close the outlet shutoff valve. With the system pressurized, it should be checked for leaks. Once it is determined that there are no leaks, close the inlet valve.

15. If no leaks occur and discharge volume is acceptable, reinstall lamp by following the steps in “Lamp Installation or Replacement” section on Pages 7–8.

**WARNING** Germicidal ultraviolet rays are harmful to eyes and skin. Do not restore power to disinfection system until lamp and both EASY-OFF® End Caps have been properly reinstalled.
TROUBLESHOOTING

Always disconnect power to the disinfection system before performing any service or maintenance.

IMPORTANT: This unit is to be serviced ONLY by qualified, and appropriately licensed, personnel.

**Patent Notice**

No attempt has been made to determine the patent status of applications illustrated or described in this publication. Inclusion in this publication of any design or method of use, which may be patented, is not to be construed as promoting or sanctioning unauthorized use.

**WARRANTY & PRODUCT REGISTRATION**

We warrant this product to the original owner to be free from defects in material and workmanship when installed in accordance with Atlantic Ultraviolet Corporation® specifications for a period of time as follows:

**UV Water Purifier Chambers** – Type 316 stainless steel chambers will have a Twelve (12) year Limited Warranty on the stainless steel chamber, from the date of original purchase while the Type 304 stainless steel chambers will have a Six (6) year Limited Warranty on the stainless steel chamber.

**UV Air Disinfection Housing** – Three (3) year Limited Warranty on the metal housing, from the date of original purchase.

**Ballast** – Three (3) year Limited Warranty, from the date of original purchase.

**UV lamps and Other parts** – One (1) year Limited Warranty from the date of original purchase.

Within the warranty period we shall repair or replace such products, which are returned to us with shipping charges prepaid and which are determined by us to be defective. This warranty will not apply to any product, which has been subjected to misuse, negligence or accident; or misapplied; or modified; or repaired by unauthorized person; or improperly installed. Warranty will be null and void if any of the product’s original labels are removed. This Limited warranty excludes the cost of labor.

The Buyer shall inspect the product promptly after receipt and shall notify us at our main office in writing of claims, including claims of breach of warranty, within thirty (30) days after the Buyer discovers or should have discovered the facts upon which the claim is based. Failure of the Buyer to give written notice of a claim within the time period shall be deemed to be a waiver of such claim.

The provisions of the above warranty are our sole obligation and exclude all other remedies or warranties, expressed or implied, including warranties of merchantability and fitness for a particular purpose, whether or not purposes or specifications are described herein. We further disclaim any responsibility whatsoever to the customer, or to any person for injury to person, damage to, or loss of property or value caused by any product which has been subjected to misuse, negligence, accident; or modified or repaired by unauthorized persons; or improperly installed.

Under no circumstances shall the Company be liable for any incidental, consequential or special damages; losses or expenses arising from the contract for this product, or in connection with the use of, or inability to use, our product for any purpose whatsoever.

Be sure to register your product and validate purchase within 30 days — registration is simple and will take less than 2 minutes to do.

**NOTE** – failure to register your purchase may jeopardize warranty.

Go to Ultraviolet.com and scroll down to the bottom of the page, under “Trust” click the “Warranty Registration Form”, complete and click “Submit”. Or click on “Warranty Registration PDF” to download the warranty registration card as a PDF, complete and mail to us at 375 Marcus Boulevard, Hauppauge, NY 11788, or simply fax to 631-273-0771. If you prefer to register by phone, please call 631-273-0500 and our customer service staff will be glad to assist you.

For your convenience, record the following information below. The model and serial number can be found on a label located on the **INFINITY™** Liquid Disinfection System. Keep this manual, along with proof of purchase, handy when contacting our offices.
