# Sanidyne®

GERMICIDAL ULTRAVIOLET PORTABLE AREA SANITIZERS

## Veterans Memorial Hospital

In September 2020, the Veterans Memorial Hospital in Allamakee County, Iowa received two Sanidyne® UV-C Portable Area Sanitizers. After a patient's discharge and standard cleaning procedures, each room was treated by one of these UV-C models for 30 minutes. Since the time of purchase, these sanitizers have provided additional germ-killing disinfection to all areas of the hospital.

Pictured to the right are Tara Reisinger, RN and Infection Control Specialist—along with Rose Ann Mark, Housekeeping Supervisor. Both were confident the Sanidyne® would bring significant benefits long after the COVID-19 pandemic was behind them. With this extra level of disinfection, they could be sure they had knocked out *C. diff*, *Staph*, and other drug-resistant bacteria.

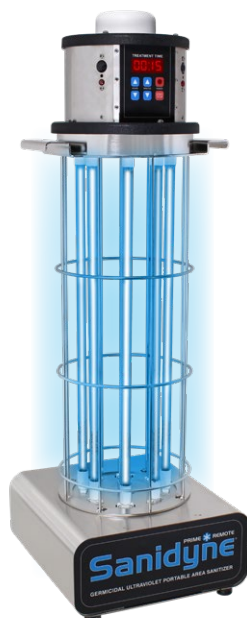

“

It gives all of us in Housekeeping great peace of mind to know that each room has received this extra disinfection following our thorough cleaning. Sanidyne® can treat an entire room and is easy to use. It will continue to be an important tool in our process.

—Iowa Veterans Memorial Hospital (Rose Ann Mark, Housekeeping Supervisor)

## Department of Laboratory Medicine

We sold our Sanidyne® UV-C Portable Sanitizer to a large university in Florida. Six months after their purchase, one of our UV specialists followed up with the Department of Pathology, Immunology, and Laboratory Medicine to see how the Sanidyne® was performing.

“

So far it's working very well...exactly how we envisioned! We have several people using it—instructions were easy to follow, the UV warning signs and face shield are great. We're using the Sanidyne® to sanitize the floor and working surfaces that cannot be decontaminated by other means.

—Florida University Hospital, Department of Pathology, Immunology & Laboratory Medicine

# Hydroelectric Facility

Duke Energy, an electric utility to the southeastern U.S., contacted Atlantic Ultraviolet Corporation® due to a mold outbreak. The fungus *Aspergillus*, discovered at one of their hydroelectric facilities, had already brought a costly shutdown upon them the year before.

When they again found this fungus, one of their representatives looked for a non-biocide-based method of control. He was aware that UV had sanitizing capabilities and found the Sanidyne®. The electrical requirement being a normal voltage was very helpful for quick deployment. They had it express delivered, set it up with appropriate curtains and restricted access to the unit, and ran it for a couple of weeks.

In the end, we did not have an outbreak. I think that the Sanidyne® was likely a major contributor to controlling a nuisance issue at our station and keeping us from risking some significant lost time during an ongoing major outage.

—Tim from Duke Energy

# Martial Arts Studio

During the heart of the COVID-19 Pandemic, Tiger Schulmann's Martial Arts Studio in Smithtown, NY weathered the same challenges every fitness facility experienced. Through lockdowns, capacity restrictions, and increased safety protocols, Sensei James Leonelli came out the other side with an increased awareness of the health threats facing his industry. He also realized that the disinfection procedure for his martial arts studio needed to move to the next level—especially in the mat area, their high-touch zone.

In addition to the hospital-grade liquid disinfection cleaner used throughout his studio, Sensei Leonelli purchased the Sanidyne® after speaking with one of our UV application specialists. Since each side of their mat area received a 25-minute treatment session, the entire area (1,330 ft<sup>2</sup>) took less than an hour to disinfect.

By including germicidal UV air and surface disinfection in our procedure, we will protect our students from future outbreaks—not only from surfaces, but from the air and hard-to-reach areas that may not be contacted by liquid cleaning solutions.

— Tiger Schulmann's Martial Arts (Sensei James Leonelli)
